

Didenegar Hooshe Noo is a leading and dynamic company in the field of artificial intelligence and surveillance systems, committed to enhancing security, safety, and efficiency. The company offers AI-powered services through processing modules integrated with surveillance cameras, enabling intelligent, real-time event detection. This innovation transforms cameras from simple monitoring devices into advanced intelligent systems. With cutting-edge technologies, these systems enhance environmental monitoring, incident detection, and safety management. Our team of seasoned experts, utilizing the latest scientific advancements, focuses on designing and implementing intelligent systems, data analysis, machine learning, and automation. This dedication has resulted in the development of smart surveillance camera management software, the Negah Media Asset Management System, and various AI modules. We strive to contribute to the transformation of various industries, businesses, and the digital economy.
